

Fluid Path Products

Safety. Repeatability. American Made.

Metal Detectable Polymer Solutions

Mixed Gaskets

Gaskets are susceptible to fragmenting, which puts processed fluids at risk for contamination. Fluid Path Products detectable gaskets are identified by downstream metal detectors ensuring that your finished product is captured before it's shipped to consumers. We are the pioneers of metal detectable gaskets for the food processing industry. Now you can buy metal detectable gaskets manufactured in America by FPP comprised of the highest quality polymer compounds in the industry.

Choice of rubber and plastic materials and geometries are endless. Our compounds are designed for long life and chemical resistance of CIP chemicals.

Fluorosteel

Materials: Buna, EPDM, silicone, Viton, PTFE, and many others.

Geometries: o-rings, clamp gaskets, John Perry, Bevel Seat, cord, sheet
